

OneFit Testing Notes / Issues

Gym User

- **Plans page**

- Users can generate and save a plan, but after saving, they cannot view the full plan details.
- Only the plan title is shown.

- **Activity page**

- Users can add activities, but the input panel seems biased toward running.
- For non-running activities, it is unclear what should be entered under "steps".
- The added activity can be seen on the dashboard.

- **Diet page**

- The AI accepts invalid non-food inputs, such as "truck", and still records them.
- Although no calories are provided, the meal is still logged.
- Since we do not have time for fine-tuning, we can add error handling such as: "Failed to log meal. Please enter a valid food item."

- **Progress page**

- The weight trend chart is hard to read when the weight difference is only around 1 kg.
- The "Share Community" feature has an issue.
- Badges can only be downloaded for the latest progress.
- Users cannot choose previous progress history to generate a badge.

- **Calendar page**

- Adding time is well implemented.
- However, when a user is late, the schedule still appears as normal.
- There is no other status such as "Late".

- **Messages**

- Need to confirm how to test the message feature.

- **Notifications**

- Notifications are working properly.

- **Check-ins**

- 6 check-ins were logged.
-

Wellness Specialist

- **Client page**

- It is unclear what the "Risk" field is used for.

- **Tasks page**

- Assigned tasks cannot be deleted.

- **Plans page**

- The calories field accepts text/string input.
- However, the final value becomes 0.
- There should be validation to prevent users from entering alphabets in the calories field.

- **Content page**

- Uploaded images cannot be deleted.

- **Announcement page**

- "All members" and "Everyone" seem to mean the same thing.
- This may confuse users.

- **Community page**

- Groups cannot be deleted.
- The system allows two groups with the same name.
- Users cannot post in the community.

- **Messages**

- Need to confirm how to test the message feature.

- **Notification page**

- Announcements do not show the author.

- For example, if an admin posts an announcement, users cannot see who posted it.

- **Reports page**

- It is unclear what “Clients by Goal” means.
 - The report cannot be filtered by selected user.
 - The report only shows recommendations, so it should be clearly stated that it is generated by AI.
-

Wellness Specialist to Gym User

- **Dashboard page**

- Calories only calculate workout activity.
- Meal calories are not included.

- **Plans page**

- Users can view meal plans.
- Gym users can also see the plans they created themselves below.

- **Log Diet page**

- Users can see the meal plan created by the wellness specialist.
- This is similar to the Plans page.

- **Meal Plans page**

- Users can view plans created by the wellness specialist.

- **Feedback**

- It is still unclear what the feedback feature is used for.

- **Community**

- Users can see the groups created by the wellness specialist.

- **Messages**

- It is unclear what the message feature is used for.

- **Notifications**

- Notifications work properly.
 - However, announcements still do not show the author.
-

Admin

- **Dashboard**

- The search bar does not return any results.

- **Users page**

- The search bar does not return any results.

- **Security**

- Need to clarify what security features are included and how they should be tested.
