Revisions

Version	Primary Author(s)	Description of Version	Date Completed
Ver 1.0 (Part I)	Yap, Wong, Thee	SRS — problem statement, actors, use cases, class diagram/ERD, NFRs	16/04/2026
Ver 2.0 (Part II)	Yap Hui Chi Wong Kai Shen Thee Khai Qin	SDS — activity, sequence & state diagrams, data dictionary, architecture, interface & component design	07/06/2026
Ver 3.0 (Part III)	Wong Kai Shen	working prototype, implementation walkthrough, testing procedures, project monitoring, development journey	18/06/2026

1 System Overview

1.1 Description

1.2 Use Cases

<TO DO: List the actor and use cases required in a table as shown below.>

Actor	Use Cases
Actor name	Use case 1 Use case 2

1.3 Assumptions and Dependencies

<List any assumed factors (as opposed to known facts) that could affect the requirements stated in the SRS. These could include third-party or commercial components that you plan to use, issues around the development or operating environment, or constraints. The project could be affected if these assumptions are incorrect, are not shared, or change. Also identify any dependencies the project has on external factors, such as software components that you intend to reuse from another project.

TO DO: Provide a short list of some major assumptions that might significantly affect your design. For example, you can assume that your client will have 1, 2 or at most 50 Automated Banking Machines. Every number has a significant effect on the design of your system. >

2 Requirements

2.1 Use Case Diagram

<TO DO: Place the actor's use case diagram here.>

2.2 Class Diagrams / ERD

<TO DO: Place the class diagram / ER diagram here.>

3 Design

3.1 Use Cases

3.1.1 Use Case 1

<TO DO: Describe the use case and place the sequence diagram.>

3.1.2 Use Case 2

<TO DO: Describe the use case and place the sequence diagram.>

3.2 Data Dictionary

<TO DO: Describe the data dictionary and place the table with the details here>

3.3 Subsystem Architecture

<TO DO: Describe the subsystem and place the architecture diagram here.>

3.4 Subsystem Screens

<TO DO: Describe the screens of subsystem 1 and place the screen designs here.>

3.5 Subsystem Components

<TO DO: Describe the subsystem components (modules, classes, packages, etc.) and the table with the subsystem components here.>

3.5.1 Component 1

<TO DO: Describe the component and place the diagram here. There should be algorithm, pseudocode, flowchart, activity diagram to support the processing in the component.>

3.5.2 Component 2

<TO DO: Describe the component and place the diagram here. There should be algorithm, pseudocode, flowchart, activity diagram to support the processing in the component.>

...

3.6 Actor 1 State Transition Diagram

<TO DO: Describe the states, events/triggers, transition conditions, and final states associated with Actor 1. Place the UML State Transition Diagram here.>

4 Implementation

4.1 Development Environment

<TO DO: Describe the development environment here with relevant images that shows the code.>

4.2 Main Program Codes

<TO DO: List and describe the applications required to implement the components, and the table with application and files, and place the relevant images that shows the code for the files here.>

Application	Files
Application 1	Application1file1.py Application1file2.html Application1file3.html
Application 2	Application2file1.py Application2file2.html

4.2.1 Application1file1.py

<TO DO: Place the relevant images that shows the code for the file here.>

4.2.2 Application1file2.html

<TO DO: Place the relevant images that shows the code for the file here.>

4.3 Sample Screens

<TO DO: Describe and place the screens of subsystem 1 here.>

...

5 Testing

5.1 Test Data

<TO DO: Provide a detailed description of the test data used to verify the subsystem here.>

5.2 Acceptance Testing

<TO DO: Prepare the acceptance test for the subsystem>

Criteria	Fulfilled	Remarks

Date tested : _____

% Complete : _____

Tested by : _____

Verified by : _____

...

5.3 Test Results

<TO DO: Place the subsystem/application screens here.>

6 Conclusion

<This section should include details of completion of software, software quality assurance, group collaboration, problems encountered>
